BOOK SYNOPSIS

Inhaltsangabe: Abstract: Build Operate Transfer-Models roughly mean that a construction company operates a new built facility on his own or by a company, founded on its behalf, for a limited time. The orderer outsourced the production and pays for each manufactured unit (Pay-on-Production) instead of doing the whole investment for the new facility. At the transfer step the orderer either starts with operating the facility on his own, extends the contract with the facility deliverer (respectively with the extra-founded company), or looks for a new partner for operating the facility. In the middle 90 s first BOT projects had been realized in the automotive industry. Only few car manufactures went this way and with different motivations, but all of them expected advantages for their companies. This dissertation will analyze different motivations that led to the decision to ask facility deliverers for offering BOT-Models. An investigation of the automotive environment will be done and based on these results a statement will be derived under which circumstances BOT projects can fulfill the expectations of their customers and if sustainable competitive advantages can be generated with this approach. As BOT projects include outsourcing of own activities for a long period of time, long-term effects especially on industry attractiveness have to be considered, too. BOT projects are meant to generate a win-win situation between OEMs and facility deliverers. Hence it is necessary to understand advantages and disadvantages on both sides, which will be done in a study of this paper. As BOT projects can be realized for construction projects with different degrees of integration into production processes, resulting consequences are different, too. Therefore investigations of this dissertation will be limited to BOT projects with a high degree of integration; nevertheless examples of medium and low integrated facilities will be given as well. Zusammenfassung: Betreibermodelle sind eine spezielle Art der Projektgestaltung, die anfangs vorwiegend im öffentlichen Sektor Anwendung gefunden hat. Hier waren die Einbeziehung von privaten Partnern in öffentliche Projekte (Public Private Partnership) und leere öffentliche Kassen die treibenden Kräfte. Mitte der 90er Jahre wurden die ersten Betreibermodelle in der Automobilindustrie realisiert, zum Beispiel bei VW do Brazil und MCC Smart / Hambach, um nur die Bekanntesten zu nennen. Diese Dissertation zeigt die [...]

BOT-MODELS AS INSTRUMENT FOR STRATEGIC COMPETITIVE ADVANTAGES IN THE AUTOMOTIVE INDUSTRY - Are you looking for Ebook

BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry? You will be glad to know that right now BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry is available on our online library. With our online resources, you can find Applied Numerical Methods With Matlab Solution Manual 3rd Edition or just about any type of ebooks, for any type of product.

Best of all, they are entirely free to find, use and download, so there is no cost or stress at all. BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry may not make exciting reading, but Applied Numerical Methods With Matlab Solution Manual 3rd Edition is packed with valuable instructions, information and warnings. We also have many ebooks and user guide is also related with BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry and many other ebooks.

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry. To get started finding BOT-Models As Instrument For Strategic Competitive Advantages In The Automotive Industry, you are right to find our website which has a comprehensive collection of manuals listed.
